EXECUTIVE SUMMARY

Future IT Solutions is a subsidiary of Techie on Call cc. Future IT Solutions was started to provide software solutions, website development and consulting services to SOHO, Small, Medium, Large and Blue Chip Companies. We also provide IT solutions and services to National Government, Local Government, Parastatals and Government Agencies. Owned and managed by experienced players in the IT industry, Future IT Solutions is a 100% black owned Software Development Company. Our best-of-breed Approach allows us to maximize productivity and keep risks to an absolute minimum. Future IT Solutions head office is in Gauteng and has a national footprint within South Africa. As an owner-managed business, the shareholders are directly involved in all aspects of the business and personally supervise major projects ensuring clients expectations are in line with delivery.

VISION

Future IT Solutions vision is to be the best in providing IT solutions and services with customer excellence and sound business practices.

MISSION STATEMENT

Future IT Solutions mission is to be a customer focus company, serving our shareholders, business partners and clients to the best of our ability, while adding value to our clients businesses.

SOLUTIONS and SERVICES OFFERED

JCI SOFTWARE

Future IT Solutions as developed the JCI software which is a powerful customizable platform and framework for developing many types of applications, with a focus on service, management and billing. JCI has a suite of ready-to-use adaptable applications primarily in the Service, Support, management and billing segment. JCI is powered by a SQL database and the features include the following:

- Inbox on the first screen with:
 - Quote Counter, Job Card Counter and Accounts Counter
 - Age Analysis
 - Stock Level Alerts
 - Alerts of expired Quotes, Job Cards
 - Alerts of recurring Invoices
- Convert Quote to Job Card
- Convert Job Card to Invoice
- Detailed Age Analysis reports on your clients
- Ready to use Reports and Graphs
- Built in print and email functionality
- JCI is a web based software, which gives you the flexibility to be anywhere in the world and still manage your business

Consulting Services

Future IT Solutions employs specialists with a wide range of skills and commercial experience across multiple projects and business domains that are all focused on our core skill of business analyst, project management, software development and system integrators. They are service oriented and are expected to bring energy, experience, and commercial end to end solutions, making us a one stop shop when it comes to services and solutions.

Our skills base is underpinned by business analysis, project management, software development and systems integration skills. We also offer other skill for your projects with partner base.

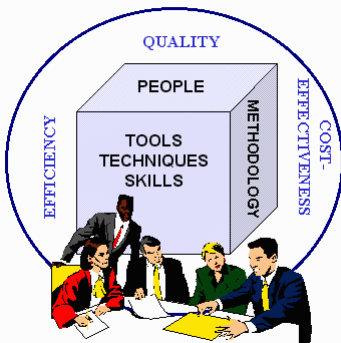

Our project managers are leaders in the field of project management disciplines such as negotiating, presenting, resource scheduling, costing, scope management, reporting, risk management, estimating, people management and expectation management.

Our business analysts are skilled and experienced in defining business needs, improving business efficiency, and providing innovative and constructive ideas to aid businesses in realising their goals. Assisted by a range of techniques, refined through years of use, our analysts will always endeavour to thoroughly understand and identify 'what' is required before deciding 'how' to apply the best technology solution within each domain space.

Our software developers are finishers, focused on quality software solutions that add value to business.

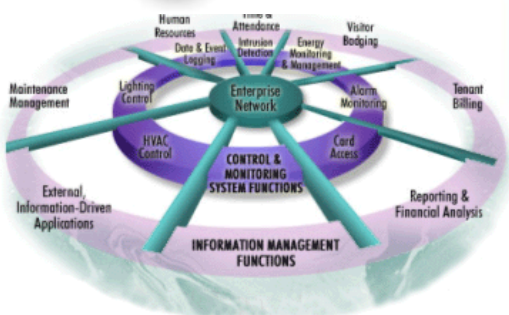

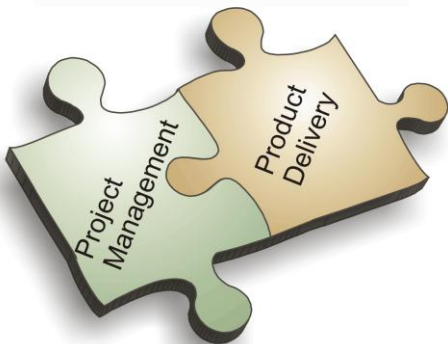

Our system integrators have a number of years experience in integrating the most complex systems as well as legacy system to the latest software available.

The Successful Business Analyst

Website

Future IT Solutions uses the latest technology to design and develop company websites. The software allows Future IT Solutions to design and develop the website to their client requirements. Future IT Solutions works closely with the client to make sure we meet the client's expectations and all public releases of the website is governed by the approval of the client.

Future IT Solutions use two different approach's when designing and developing a website. The first approach is static website pages, all the pages of the website are designed, developed and maintained by Future IT Solutions.

The second approached is that the entire website is designed with a content management system on the back end. Future IT Solutions will design and develop the initial outlay and content of the website, but the client maintains the website. This means the client can update their information at any time.

The screenshot shows the Kimway Technology website in a Windows Internet Explorer browser. The address bar displays "http://www.kimway.co.za/".
